

# CLOCK SPRING®

## Application Note

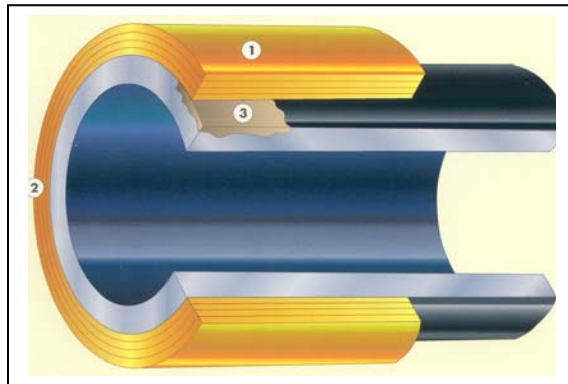

Repairing a pipe with a Clock Spring® kit designed for a larger pipe size

There are times when an Operator may discover a defect or imperfection in his pipeline that requires immediate repair. Clock Spring® kits may be available but not in the size required. In this case the Operator can use a Clock Spring® repair kit designed for a larger pipe size.

Clock Spring® composite coils are designed to provide 8-wraps around the pipe to be repaired. If a coil from a larger Clock Spring® repair kit is used it will provide more than the required 8-wraps and will be an effective repair.

For example, a 30-inch Clock Spring® can be used to repair a 24-inch diameter pipe. The 30-inch unit will, in this case, provide approximately 10-wraps on the 24-inch pipe.

This is a deviation from standard Clock Spring installation procedures and each case must be reviewed by Clock Spring Company before the repair is made.

**Simply the smartest pipeline repair decision you can make!**
