

CLOCK SPRING®

Application Note Disposal of MA 440 and MA 441

The adhesives are classified as hazardous waste in their virgin state and the activators may or may not be depending on local regulations. Disposal should be in accordance with State, Federal and local regulations.

Unused material may be neutralized for disposal as non-hazardous waste by thoroughly mixing the adhesive and activator and allowing them to fully harden. To prevent excessive heat build-up, do not allow hardening in layers greater than 2-inches (51 mm) thick.

Mixtures of adhesive and activator are classified as as hazardous waste when not solidified whether due to improper mixing or obsolete material not reacting properly

Incineration and fuel blending are the preferred methods for disposing of hazardous wastes and liquids.

Simply the smartest pipeline repair decision you can make!
