

CLOCK SPRING®

CLOCK SPRING CHOSEN FOR MAJOR EUROPEAN WATER PROJECT

Clock Spring has been selected as supplier of Pipe Supports by SEBES (Syndicat des Eaux du Barrage d'Esch-sur-Sure) in Luxembourg. A major 12" (300mm) domestic/fire water pipeline is being constructed alongside the new motorway running from Central Luxembourg to the north. Clock Spring Pipe Supports are being installed at each of the purge chambers along the line providing protection from abrasion at locations where the pipeline rests upon concrete supports.

The system can be used on both new and in-service pipelines and pipework and helps to eliminate: erosion, crevice and galvanic corrosion problems.

Pipe Supports are available as standard to suit ¾" to 48" O.D. and comprise a high-strength corrosion resistant fiberglass sleeve, a high performance adhesive and a filler material.

Pipe supports (completed application right) can be installed in as little as 15 minutes without the need for hot work, welding or specialized machinery.
