

## Certification Training and Installation

Installation variables are critical to the performance of the composite. Clock Spring provides pipeline owners and operators comprehensive training and quality assurance in the installation of its products.

Applicants learn installation procedures through hands-on training with a Certified Trainer. Upon completion of the training, the candidates are required to successfully complete an online exam in order to attain their Installer Certification. This certification typically takes place at Clock Spring's manufacturing facility in Houston, Texas. In some cases, operators ask Clock Spring's certified trainers to qualify their personnel on a live line in the field so the training can be immediately followed by the required repairs.

For operators who prefer to outsource installation, Clock Spring or one of our preferred contractors also acts as the service provider of qualified trained, certified installers. Clock Spring has offered installation services throughout its 25-year history. We have the experience of hundreds of installations under our belts with a great safety record and craftsmanship.

Clock Spring is a licensed trademark of NCF Industries, Inc.
